INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

This report makes reference to the following documents:

D1: EP 0 386 960 A, which describes reversible thermosetting gel compositions with film-forming agents, water and pH regulation for the topical, transdermal and transmucosal treatment of diseases;

D2: WO 99/53897 A, which discloses pH-regulated film compositions for the vaginal treatment of HSV and HIV infections;

D3: EP 0 622 074 A, which discloses a transdermal composition for the administration of butyrophenones with a regulated pH value;

D4: Eaimtrakarn Sudarat *et alia*, International Journal of Pharmaceutics, Vol. 224, No. 1-2 (2001), pages 61-67, which describes how mucoadhesion is influenced by the nature of the film-forming polymer and by the pH value of the targeted organ;

D5: US 2003/091644 A1, which discloses peroxide and a pH-lowering, film-forming polymer for the treatment of vaginal infections.

If not indicated otherwise, reference is made to the passages mentioned in the search report.

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

Film-forming administration forms for the topical, transdermal and transmucosal administration of active substances are already known from D1-D5. They contain film-forming polymers and solvents (most often water), like the present application. The adaptation of the pH value of the composition as required is also already known from the prior art.

Mucous membranes, however, can take pH values of about 1 or less (for example in the human stomach) to about 9 (intestines). As a result, the definition of the pH value of the composition in connection with the pH value of the targeted mucous membrane is not restrictive over the prior art.

D4, in particular, points out that the polymer film is prepared by removing the solvent, mixing it with auxiliary substances, cutting it into parts of suitable size, then administered in dry form.

The subject matter of the present claims 1, 3-14 and 16-19 does not meet the requirements of PCT Article 33(1) and 33(2) for novelty.

Should it be possible to identify a specific novel composition, it might in certain circumstances be considered inventive in relation to the cited prior art (PCT Article 33(1) and 33(3)) because the citations do not address the problem of the irritation of the mucous membranes.
